

"Libby & Hoopla use, by county – this year vs. last?" Without a lake, you rebuild that answer by hand every year.

ONE REAL QUESTION

BRONZE  
SILVER  
GOLD

how one question becomes  
a repeatable answer

Each source lands **exactly as the vendor sent it** – nothing thrown away, provenance kept.

[rayvoelker.github.io/2026-06/  
issue\\_3\\_medallion/](https://rayvoelker.github.io/2026-06/issue_3_medallion/)

Cleaned and standardized. Identifiers fixed, an address-county lookup applied **once**, the sources joined together so they can talk to each other.

COUNTY, NOT CUSTOMER

We answer "how many in this county" **without keeping who**. Privacy is built into the shape of the data, not bolted on later.

The finished county report – **re-order** it fresh, any time. No rebuilding from raw.

ALREADY RUNNING

This isn't a someday. Catalog, circulation, Libby, reading lists – all flowing in **on a schedule**. The county lookup built once now serves Hoopla next, the next vendor after that.
